

TELEMATICS

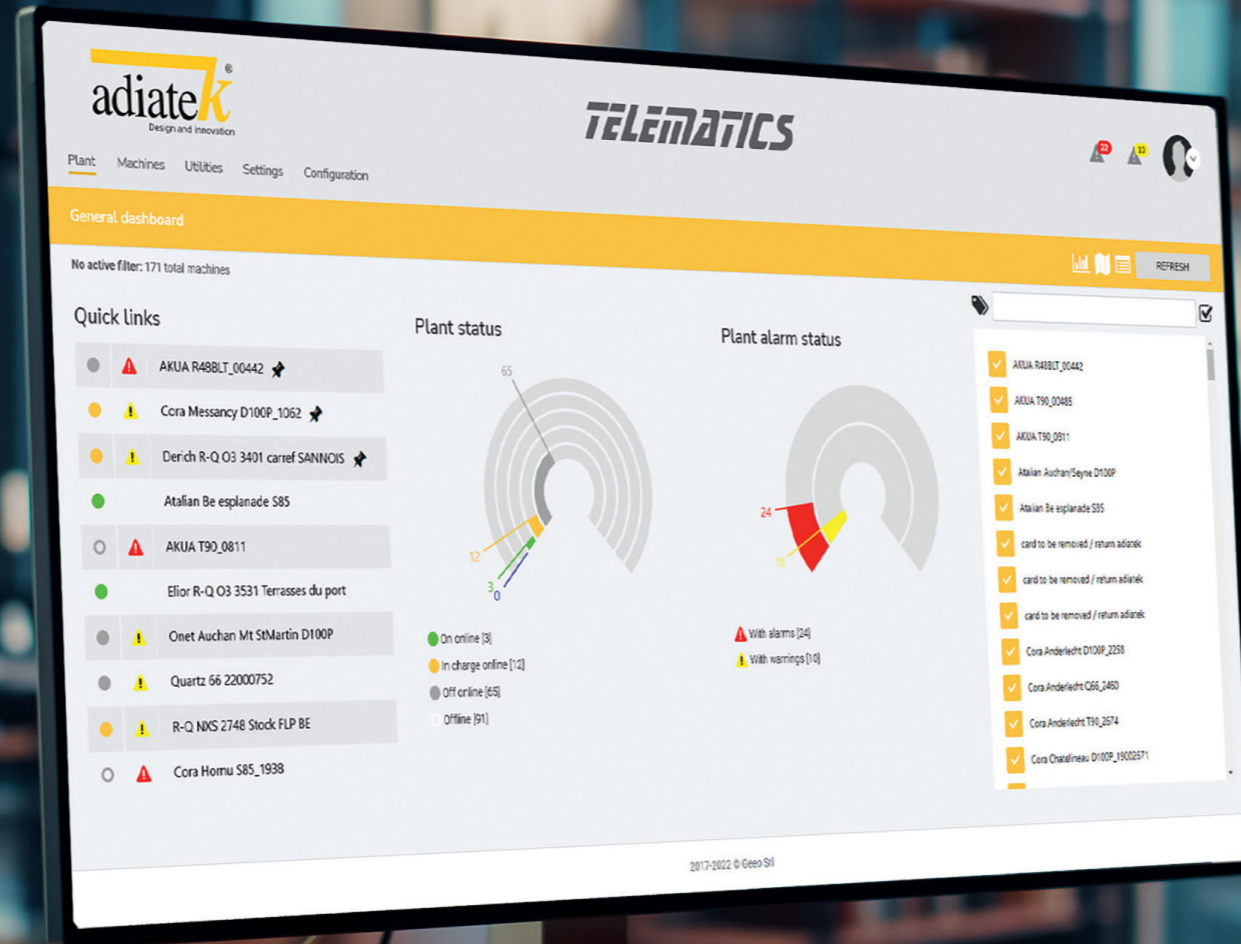

Telematics, control in your hands

It is a system that allows to know the machine operation through any electronic device, in real time.

Thanks to the Calendar and the Geolocation it is possible to know if the machine is working in the areas and during the time slots that were previously set.

It has to be specified that TELEMATICS is not a theft protection system.

The advantages

Being informed on the machine status 24/7

Reducing the intervention times and plan a targeted assistance

Having a planned maintenance program and manage large fleets of machines

Monitoring the work quality in real time

Getting instant information about the machine (serial number, consumptions, software)

Targeted price quotations for the rent costs (working hours, consumables)

Planning the working hours of the machine

Maintainers planned coordination

Check the status of your machines, everywhere

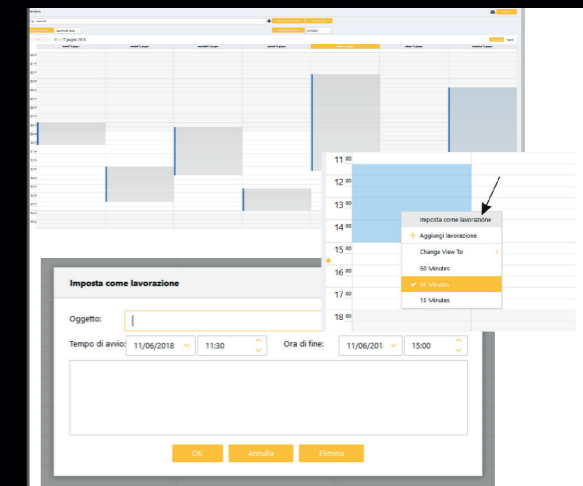

GPS monitoring

By drawing a working area it is possible to know if the machine is working inside the delimited space.

Setting the Calendar

Thanks to a quick and simple calendar tool it is possible to set the working time slots in which the machine is allowed to operate.

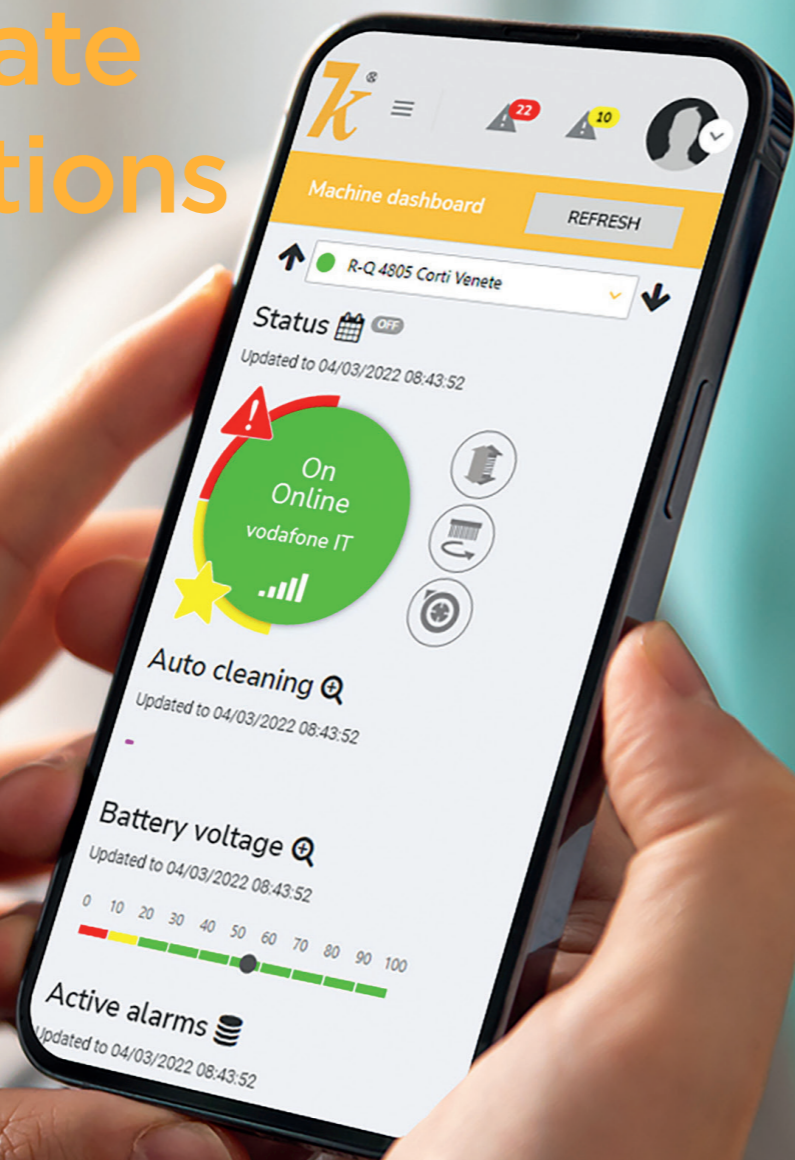

Your machines current consumptions

TELEMATICS transmits real time all the informations regarding the machines so you will not have, for example, to use tools in order to discover the motors consumptions.

Immediate notifications

TELEMATICS will immediately warn you when:

- > the work time slots are not observed,
- > the machine works outside the limits we set on the map,
- > an alarm or a fault occurs.

Such notifications can be received via SMS or MAIL services.

The models

compatible

Telematics is currently available on all Ride-on models.

The R-Quartz model is equipped with Telematics as standard.
